▼ How this was calculated

Risk band: **medium**

Heuristic risk estimate only — derived from a static/historical synthetic dataset; not a live delay, weather, legal, or guaranteed-outcome prediction. Nosana evidence — remote job succeeded; result from decentralized GPU workload.

A 75-minute connection at BBB was evaluated against 800 historical records. Monte Carlo simulation (800 runs) estimated a 30.4% probability of tight connection. Combined with route miss rate, the heuristic risk score is 0.2895 (medium band). This is a heuristic indication only — not a prediction or guarantee.

Dataset: hist-delay-v1 · Latency: 11072ms
