

StitchCheck UI Simplification & Consistency Review

Evidence-led audit · 24 Aug 2026 · no provider calls made during capture

1. Safety notice — healthy guardrails, excessive demo framing

2. Itinerary review — source is local while header says live

Findings and recommended copy system

Highest-impact inconsistency

The app-wide “Live — Atlas Sandbox” badge appears while the original itinerary is a local fixture. Scope the live claim to the alternatives panel instead.

Minimal source tags

Use one tag directly below each panel heading: “Source: Local fixture”, “Source: Atlas Sandbox · live”, or “Source: Offline fallback”. Remove verbose demo/source body copy.

Verified data flow

Original itinerary: Local fixture in both modes. Alternatives: Atlas Sandbox live only after confirmation in live mode; otherwise local fixture. Recovery animation: offline mock.

Two-pass implementation

1. Correct terminology: current extraction label is “Local fixture”; remove Direct Gemini narration. 2. Introduce shared DataSourceTag plus one screen footnote: “Demo build — sources are tagged where data appears.”

Safety boundary retained: sample documents only; no booking, payment, reservation, or order is created. These statements stay as task guidance, not repetitive demo disclaimers.
