The user clicks Confirm. The panels activate. The status banner states that no external service call was made. This confirmation gate keeps the traveler in control at every step.

## ✓ Itinerary Confirmed

Source: Local fixture

The itinerary has been confirmed. Risk and alternatives panels are now available.

Leg 1: AAA → BBB, SC-101, 08:00–10:30

Leg 2: BBB → CCC, SC-202, 13:00–15:45

Connection: 150 minutes

✓ **Success:** Itinerary confirmed. Read-only. Retrieval time: 2026-08-24T12:33:35.029Z

## Connection Risk — Heuristic Result

Local fallback — not Nosana evidence

## Safer Alternatives

Source: Atlas Sandbox · live

Source environment: atlas-sandbox

Demo scenario: Success (medium risk) ▼

Risk Band: medium

Score: 0.293  
Simulations: 800

Assumptions:

- Historical average delay at BBB: 25 min
- On-time rate: 0.72
- Route miss rate: 0.28
- Monte Carlo simulations: 800

Heuristic risk estimate only — derived from a static/historical synthetic dataset; not a live delay, weather, legal, or guaranteed-outcome prediction. Synthetic local placeholder — not Nosana evidence

A 75-minute connection at BBB was evaluated against 800 historical records. Monte Carlo simulation (800 runs) estimated a 31.3% probability of tight connection. Combined with route miss rate, the heuristic risk score is 0.2930 (medium band). This is a heuristic indication only — not a prediction or guarantee.

Dataset: hist-delay-v1 · Fallback used: yes · Latency: 1ms

Alternatives are read-only. No booking, payment, or order is created.
