

ATLAS · QODER

Using Atlas Flight Booking Skill in Qoder

A visual guide to installation, authorization, flight search, and Sandbox testing

Purpose Use natural language in Qoder to search and compare flights. On first use, Qoder checks the required environment and guides you through Atlas authorization.

Before you begin

- Install and sign in to Qoder.
- Use an existing ATRIP account, or create one during authorization.
- An internet connection is required for the initial installation and search.

Scope This guide covers Skill installation, Atlas authorization, flight search and comparison, and a complete Sandbox booking rehearsal through payment confirmation and test ticketing.

STEP 1 Install Atlas Flight Booking Skill

Enter the following command in the Qoder chat box and send it:

```
npx --yes skills add https://github.com/atlas-doc/atlas-flight-booking-skill --skill atlas-flight-booking
```

Wait for Qoder to complete the installation. The message atlas-flight-booking skill has been installed successfully confirms that the Skill is ready.

Tip Installation is required only once. For future searches, describe your flight request directly; you do not need to name the Skill in your prompt.

STEP 2 Describe your flight request in natural language

Include the origin, destination, departure date, and number of passengers. For example:

```
Search for flights from Shanghai to Tokyo on September 4, 2026, for one adult.
```

Qoder recognizes the flight-search task, invokes the installed capability, and checks your Atlas authorization status.

Figure 1. Qoder checks the environment and provides the Atlas authorization link

STEP 3 Open the Atlas authorization page

Select Open Atlas authorization in the Qoder response. Your browser opens the ATRIP sign-in page.

- Existing ATRIP user: enter your account details and sign in.
- New user: select Create one, complete registration, and then sign in.

Figure 2. ATRIP sign-in page

Note Keep the Qoder conversation open while you complete authorization in the browser.

STEP 4 Review and authorize the Skill

After signing in, the page displays the active Atlas account and the permissions requested by the Skill. Review the information, then select Authorize and continue.

Figure 3. Atlas Skill authorization page

Privacy The authorization uses your current Atlas session. The permission scope is shown on the page, and your password and Atlas login token are never shared with the Skill.

STEP 5 Return to Qoder and continue

When the page displays Authorization complete / You're all set, close it and return to the original Qoder conversation.

Figure 4. Atlas authorization completed

Enter the following message in the same conversation:

```
I've completed the Atlas authorization. Please continue with the flight search.
```

Qoder confirms the authorization and resumes the original flight search. You do not need to repeat the complete request.

If authorization is not detected Confirm that the browser page shows Authorization complete, then continue in the same Qoder conversation rather than starting a new one.

STEP 6 Review and compare the flight results

When the search is complete, Qoder organizes the available results. These typically include flight number, route, departure and arrival times, duration, stop information, and reference price.

I've completed the Atlas authorization. Please continue with the flight search.

View 3 step

Authorization confirmed. Now let me search for your flights.

View 6 step

Good results from PVG to NRT. Let me also check other Shanghai-Tokyo airport combinations to give you a complete picture.

View 6 step

Here are the flights I found from Shanghai to Tokyo on September 4, 2026 for 1 adult, sorted by price:

#	Flight	Route	Departure → Arrival	Duration	Price (USD)
1	IJ004	PVG → NRT	17:35 → 21:35	3h 00m	\$163.27
2	IJ006	PVG → NRT	10:10 → 14:10	3h 00m	\$178.11
3	9C6217	PVG → NRT	14:55 → 19:00	3h 05m	\$178.71
4	9C8515	PVG → HND	19:10 → 23:00	2h 50m	\$178.71
5	MM876	PVG → HND	01:05 → 05:00	2h 55m	\$179.59

All flights are economy class, direct (no stops).

Important note about these results: These are real-time flight price search and comparison results only. They do not support continued price verification or ticketing through Atlas. For more details on what these reference prices cover, see [价格查询与比价说明](#).

Additionally, your account's ticketing activation is not yet complete, which means price verification, order creation, and ticketing are currently unavailable. You can visit the [ATRIP 工作台](#) to complete the remaining activation steps. Once that's done, come back and I'll re-check your status and run a fresh search with bookable offers.

Would you like to pick one of these flights to keep in mind, or would you like to complete the activation first?

Figure 5. Example flight-search results

Important The example shows real-time flight search and comparison results. If an offer is marked as a reference price, it is for comparison only and cannot proceed to price verification or ticketing. Always follow the offer status returned by Qoder and your account activation status.

Sandbox booking rehearsal

Use Sandbox to rehearse the booking workflow with test inventory and test prices. Sandbox does not create a real booking or charge a real payment method.

Before you continue Complete Atlas authorization first. Switching environments changes the local CLI configuration, so start a new flight search after the switch and do not reuse offers returned earlier.

STEP 7 Switch to Sandbox

Run the following command in a terminal:

```
atlas-flight environment use sandbox --json
```

```
(base) ➔ ~ atlas-flight environment use sandbox --json
{"schema_version": "1", "status": "success", "code": "CONFIGURATION_UPDATED", "message": "Atlas configuration updated", "retryable": false, "request_id": null, "data": {}, "details": {}}
```

Figure 6. Atlas configuration updated for Sandbox

STEP 8 Check authorization and ticketing status in Qoder

Return to Qoder and ask the Agent to check the current account status:

```
Please check my current Atlas authorization and ticketing status.
```

🕒 View 3 step

Your Atlas account is now fully activated. Here's the current status:

- **Authorization:** Active
- **Flight search:** Available
- **Ticketing:** Available

The ticketing activation has been completed since our last check — you can now proceed with price verification, order creation, and ticketing. If you'd like to continue with any of the Tokyo → Osaka flights from earlier, I can verify the latest price for you right away.

📄 🖨️ 👍 🗨️ 15.1s

Please check my current Atlas authorization and ticketing status.

Figure 7. Authorization and ticketing are available

Status check Continue only when authorization is active and ticketing is available. If the Agent reports a blocker, complete the action it provides before proceeding.

STEP 9 Start a new flight search

Enter a complete request with the route, date, and passenger count. For example:

Search for flights from Tokyo to Osaka on September 4, 2026, for one adult.

Search for flights from Tokyo to Osaka on September 4, 2026, for one adult.

🕒 View 1 step

I'll search for flights from Tokyo to Osaka. Let me first load the relevant skill.

🕒 View 17 step

I searched all Tokyo–Osaka airport combinations for September 4, 2026, one adult. Flights were found only to Kansai (KIX); no results for Itami (ITM).

Narita (NRT) → Kansai (KIX)

- MM304, depart 08:30, arrive 10:05 (1h 35m) — USD 31.84
- MM312, depart 20:20, arrive 22:00 (1h 40m) — USD 49.08

Haneda (HND) → Kansai (KIX)

- 7G021, depart 08:45, arrive 10:10 (1h 25m) — USD 57.74
- 7G023, depart 12:00, arrive 13:30 (1h 30m) — USD 59.17
- 7G027, depart 16:25, arrive 17:55 (1h 30m) — USD 59.66
- 7G025, depart 15:15, arrive 16:40 (1h 25m) — USD 82.67

The lowest price is MM304 from Narita at 08:30 for USD 31.84. All listed offers have current prices and are bookable. Let me know if you'd like to verify any offer, compare other dates, or proceed with booking.

    1m 41s

Figure 8. Bookable Tokyo-to-Osaka offers in Sandbox

Reminder Sandbox prices and availability are test data. Select an offer from the current search before continuing to price verification.

STEP 10 Select a flight and verify the price

Choose one of the returned flights. In this example:

I'd like to book flight MM304 from NRT to KIX.

I'd like to book flight MM304 from NRT to KIX.

🕒 View 6 step

The price for MM304 is confirmed at USD 31.84 (unchanged). The booking reference is `book_2b2b652f601a3abcc705d637`.

To create the order, I need the following passenger details for the one adult:

- Full name (as `FAMILY/GIVEN`, e.g. `TANAKA/TARO`)
- Gender (`M` or `F`)
- Date of birth (`YYYY-MM-DD`)
- Nationality (ISO-2 country code, e.g. `JP`)

Optional:

- Would you like to add checked baggage?
- Would you like to select a seat? If yes, I'll also ask what to do if that seat becomes unavailable during order creation (continue without it, cancel the order, or accept a similar seat).
- Contact email and mobile number (optional unless required by the system).

You can provide just the required details now and decide on baggage/seat later, or send everything together.

📄 🗨️ 👍 🗨️ 40.1s

Figure 9. Price confirmed and passenger details requested

Price checkpoint If the verified price increases, review the previous and current totals and explicitly accept the new amount before continuing.

STEP 11 Create a Sandbox test order with fictional passenger details

For a Sandbox rehearsal, use fictional data only. Baggage and seat selection are optional; this complete example proceeds without either service.

Please use the following fictional passenger details for this booking:

Full name: TEST/TRAVELER
 Gender: Male
 Date of birth: 1990-01-01
 Nationality: Japan (JP)
 Travel document: Passport
 Document number: TR0000001
 Issuing country: Japan (JP)
 Expiry date: 2032-12-31
 Contact name: TEST/TRAVELER

Please use the following passenger details for this booking:

Full name: TEST/TRAVELER Gender: Male Date of birth: 1990-01-01 Nationality: Japan (JP) Travel document: Passport Document number: TR0000001 Issuing country: Japan (JP) Expiry date: 2032-12-31 Contact name: TEST/TRAVELER

2026-08-19 09:58:42

View 3 step

The order has been created. Please review the payment summary:

- Order number: TESTA20260819095933540
- Flight: MM304 on September 4, 2026, NRT → KIX, 08:30–10:05
- Passenger: TEST/TRAVELER (adult)
- Ticket price: USD 31.84
- Baggage/seat: None selected
- Total due: USD 31.84
- Price change: Unchanged
- Payment deadline: 2026-08-19 11:19 AM (China Standard Time)

Please confirm whether you approve this exact payment. Once you confirm, I will complete the payment and ticketing.

1m 17s

Figure 10. Sandbox order created and payment summary displayed

Payment checkpoint Review the displayed flight, passenger, optional services, price breakdown, total amount, currency, and payment deadline. Do not confirm payment unless the displayed summary is correct.

STEP 12 Confirm payment and check the ticketing result

After reviewing the exact payment summary, send an explicit confirmation:

```
Yes, I approve this exact payment.
```

Yes

👁 View 3 step

Payment completed and tickets have been issued.

- Order number: TESTA20260819095933540
- Flight: MM304, September 4, 2026, NRT → KIX, 08:30–10:05
- Passenger: TEST/TRAVELER
- Total paid: USD 31.84
- Airline PNR / ticket number: S33219

Your booking is confirmed.

📄 🗨 👍 🗨 1m 52s

Figure 11. Sandbox payment completed and ticket issued

Sandbox result The returned order number, PNR, and ticket number are test results in the Sandbox environment. This flow does not create a real booking or charge a real payment method.

Return to the production environment

After testing is complete, switch the local configuration back to production and start a new search:

```
atlas-flight environment use production --json
```

Useful prompts and operating notes

A more detailed search request

Add cabin, direct-flight preference, departure time, and other conditions in the same request. For example:

```
Search for direct economy flights from Shanghai to Tokyo on September 4, 2026,
for one adult, departing after 10:00 AM.
```

Continue after authorization

```
I've completed the Atlas authorization. Please continue with the flight search.
```

Operating notes

- You do not need to mention atlas-flight-booking in every prompt; simply describe the flight task.
- On first use, Qoder may install or check a supporting CLI. Allow it to complete.
- Flight prices and inventory can change. Final availability is determined during price verification.
- If ticketing is activated for the account and a bookable offer is returned, follow Qoder's prompts for price verification and order creation.
- Baggage and seat selection are optional. If you select a seat, provide a fallback choice in case the exact seat becomes unavailable.
- Review and explicitly confirm any price increase, seat fallback, payment, or other critical step before continuing.
- After switching between Sandbox and production, start a new search and do not reuse an earlier offer.

In one line Install the Skill → authorize Atlas → switch to Sandbox → check status → start a new search → verify the price → enter fictional passenger details → review the order → explicitly confirm payment → receive the test ticketing result.
